

Draftly

AI-powered Gmail reply agent

Unlock Faster *Email* Workflows with Draftly

Project headline

Key benefits / features

Brief overview

Problem statement

Solution

WHO WE ARE:

Draftly combines Gmail and Gemini to handle repetitive email work faster while keeping final approval human-led.

THE PROBLEM:

Routine confirmations and follow-ups consume hours each week, while rushed replies create missed context and uneven tone.

THE SOLUTION:

Draftly fetches Gmail threads, learns from recent sent emails, creates context-aware drafts, and supports review plus secure sending.

WHAT'S NEXT:

Next iterations can add an inbox dashboard, smarter style profiles, background workers for retries, and stronger analytics around review quality and turnaround time.

THE BENEFITS:

- Secure Gmail OAuth2 integration for fetching, threading, and sending.
- Gemini-powered drafting with formal, friendly, and concise tones.
- Learns from recent sent emails and saved user preferences.
- Review-first workflow for approve, edit, reject, and secure sending.
- Retries, idempotency, logs, and SQLite storage improve backend reliability.

Future objectives

Connect Gmail, generate a reply, review it, and send with confidence through Draftly.

Call to action

FastAPI backend | Gmail OAuth2 | Gemini-powered drafting
